**INFORM CONSENT:**

I hereby request and consent to the performance of chiropractic adjustments and other chiropractic procedures, including various modes of physiotherapy, modalities, examination, traction, and, if necessary, diagnostic x-rays, on me by the doctor of chiropractic and/or by other office or clinic personnel.

**POSSIBLE RISKS**

I understand and am informed that, as in all health care, in the practice of chiropractic, there are some risks to treatment. **These include muscle strain, ligament sprain, fracture, disc injury, dislocation, paralysis, stroke, stiffness and soreness. The ancillary procedures could produce skin irritations, burns, or minor complications.**

**PROBABILITY OF RISKS OCCURRING**

The risks of complications due to chiropractic treatment have been described as rare, about as often as complications are seen from the taking of a single aspirin tablet. The risk of cerebrovascular injury or stroke, has been estimated at one in one million to one in twenty million, and can be even further reduced by screening procedures. The probability of adverse reaction due to ancillary procedures is also considered rare.

**OTHER TREATMENT OPTIONS THAT COULD BE CONSIDERED**

- Over-the-counter analgesics.
  - o Temporarily relieve pain but do not address the cause of the symptoms. Masking the pain means you may not feel additional damage. The risks of these medications include irritation to stomach, liver and kidneys, and other side effects in a significant number of cases.
- Medical care, typically anti-inflammatory drugs, injections, and analgesics.
  - o Temporarily relieve pain but do not address the cause of the symptoms. Masking the pain means you may not feel additional damage. Risks of these drugs include a multitude of undesirable side effects and patient dependence in a significant number of cases.
- Hospitalization in conjunction with medical care adds risk of exposure to virulent communicable disease in a significant number of cases.
- Surgery in conjunction with medical care adds the risk of adverse reaction to anesthesia, as well as an extended convalescent period in a significant number of cases.

**RISKS OF REMAINING UNTREATED**

Can further reduce ranges of motion, and induce chronic pain cycles. It is quite probable that delay of treatment will complicate the condition and delay of treatment allows formation of adhesions, scar tissue and other degenerative changes including arthritis. These changes make future rehabilitation more difficult.

**CONSENT**

I acknowledge I have discussed, or have had the opportunity to discuss, with my chiropractor the nature and purpose of chiropractic treatment in general and my treatment in particular (including spinal adjustment) as well as the contents of this Informed Consent. I consent to the chiropractic treatments offered or recommended to me by my chiropractor. I intend this consent to apply to all my present and future chiropractic care.
